

Detail — System for joining 2 roll containers.

Features

One of our latest creations is the model RB 8092 - RB 8093. An innovative roll container that meets the needs of companies dedicated to the laundry and medical sectors.

It has a AGV (automatic guided vehicle) reader system. The AGV system detects the roll containers and transports them compacted along a predefined route, without direct human intervention.

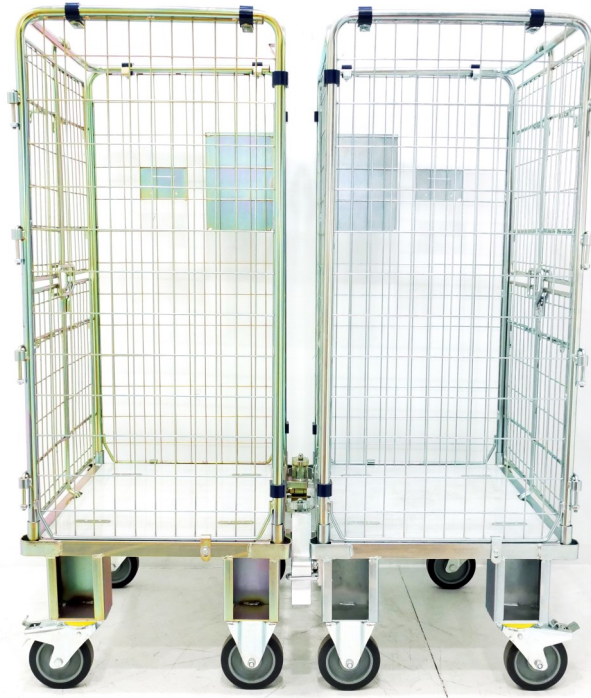

The caster wheels can be blocked to one direction using a locking system. They also have a brake that allows the roll containers to be immobilised. Two roll containers can also be easily joined together to be transported at once.

Breakdown of parts:

- 1 metal base with polyethylene plate equipped with 2 fixed and 2 caster wheels that redirect automatically once the AGV is transporting them, avoiding possible collisions. Caster wheels have a brake.
- AGV Reading system.
- 4 half central-opening doors.
- 2 sides, one with marking panel.
- Card holder.
- Rear panel, joined to the sides by 4 polyamide 6 flanges (highly resistant).
- Hooks for attaching the cover.
- Upper frame for the anchoring of doors, joined to the sides by 4 Polyamide 6 flanges.
- 1 mounting kit for rigidizing of the roll container (side-base).

Options:

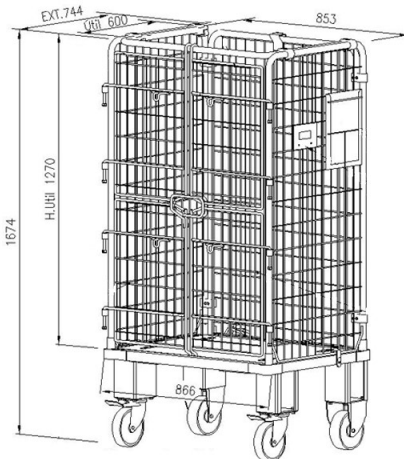

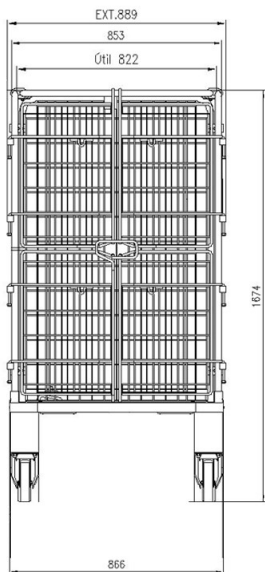

- Removable trays.
- Cover.

Finishing:

Electro-zinc + organic-mineral SEALING (silver or golden colour).

*Please enquire about other finishes.

Measurements*¹

	Height	Width* ²	Length* ²
Max. External	65.90''	29.29''	35''
Useful	50''	23.62''	32.36''
Base		26.50''	34.09''

*¹ Measures in inches.

*² Measurements can vary depending on the accessories.
